

MHR SERIES

METAL HALIDE WITH REFLECTOR FOR FIBER OPTIC APPLICATIONS

The MHR series was specifically designed for fiber optic and light pipe applications. These lamps are predominantly used in applications with a fiber diameter of more than 8mm at the input and offers an unproblematic operation with standard ballasts and thus lowers cost applications.

The MHR series features an ellipsoidal reflector coated with a special dichroic coating which transmits most of the lamp's heat radiation toward the rear.

Specifications include a 6.5mm arc gap, total luminous efficacy of 85 lumens per watt and useful lamp life of up to 6000 hours. The MHR series is an economical solution to high development and maintenance costs associated with using lamps developed for applications other than fiber optics.

FEATURES AND BENEFITS

- MHR-100D/L, MHR-100D/HR uses M90 Ballast or Electronic Equivalent, MHR-150N uses M81 Ballast and MHR-250N uses M80 Ballast
- Cold Mirror Reflector- concise front end
- Compact Design
- Aligned to a fiber during manufacturing
- Standardized AMP Connector

Application Hints

The optimal focal distance between the lamp and the fibre depends on the diameter of the fibre. A rough calculation of the optimal distance between lamp and fixture can be done by the following formula:

$$\begin{array}{l} 100/150W \quad Fd = 52mm - D * 0.77 \\ 250W \quad \quad Fd = 64mm - D * 0.77 \end{array}$$

Fd(mm): Optimal distance between fiber and lamp
D(mm): Diameter of the fiber bundle

UV and IR radiation from the lamp may cause damage to synthetic fibers. Therefore, reflective or absorbing filters are recommended for use with synthetic fibers.

Optimal distance: 100W & 150W 250W from reflector to fiber:	42mm 53mm (with ø13mm fiber bundle)
Length of Base Lead Wire:	Approx. 75mm
Base Type: MHR-100D/L MHR-100D/HR MHR-150N MHR-250N	AMP Universal Mate-N-Lok 3 channel plug 5 channel plug 5 channel plug 5 channel plug

Ballast & Ignitor Information

100W lamp—M90; 150W lamp—M81; 250W lamp—M80
At the end of their lifetime, metal halide lamps may show rectifier effects causing a rise in current of up to 3 times of the rated value thereby possibly damaging the ballast. Therefore we recommend to use only ballasts with integrated thermostats. For line compensation, a capacitor should be used. It is recommended to use ignitors with a timer switch. The use of electronic ballasts is possible if the operating frequency is below 250Hz. All lamps must be used with 4kV ignitor.

MHR-100D/L

Warm-up Time to 95% luminous flux: 2.5 minutes with standard ballast
Reignition Time: Approximately 1 minute

MHR-100D/HR

Warm-up Time to 95% luminous flux: 2.5 minutes with standard ballast
Hot re-strike version

MHR-150N

Warm-up Time: 3 minutes
Reignition Time: Approximately 2 minutes

Warning

The lamp emits UV radiation which can cause serious eye and skin damage. Therefore, the lamp must be used only in closed lamp houses.
